Fast-forward your clinical development program

At IQVIA, we're delivering that proof, today.

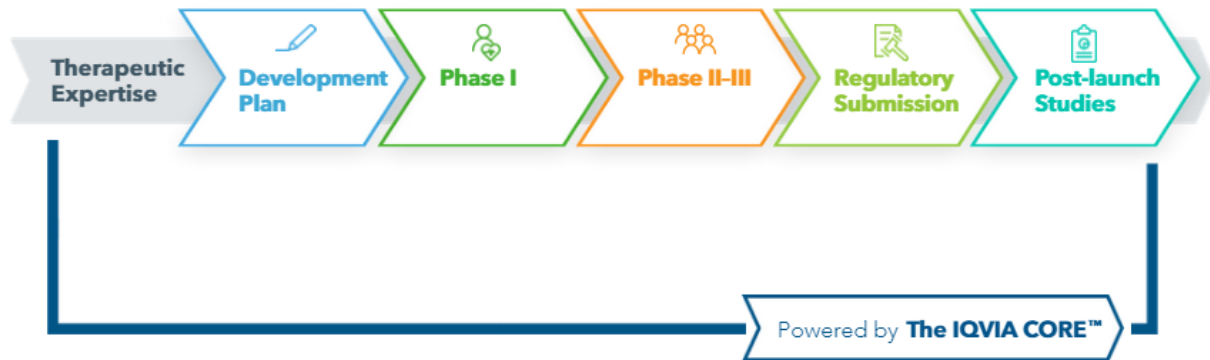

As industry pioneers, IQVIA integrates data science with human science to address the growing complexities and long-standing challenges of clinical research. We're currently providing our clients with levels of precision and speed never seen before – on more than 150 studies around the world.

Through the power of the IQVIA CORE™, we help you:

- Predict which sites can deliver the right patients and increase enrollment speed up to 30%
- Reduce trial timelines by up to 20% through faster start-up of the right sites and faster enrollment
- Use real-world data to assess your protocol and reduce the risk of protocol amendments and costly delays
- Bring commercial forecasting into your development plans, so you can evaluate new options to maximize asset value
- Ensure patient safety and data quality through automated, real-time detection of risk trends for individual patients or sites

Roll over each section to learn more

Engage via compelling evidence and insight

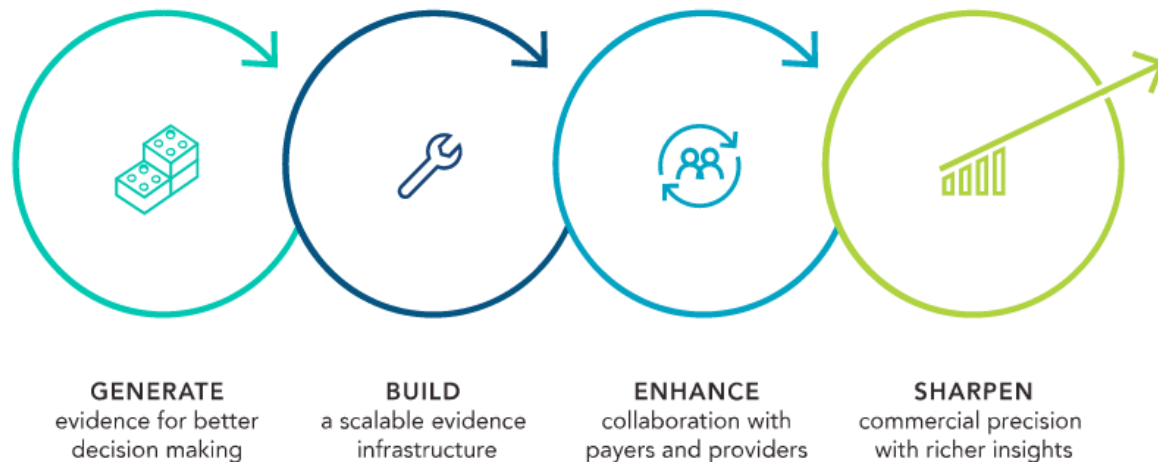

Your work promises the potential to improve human outcomes. At IQVIA, we're rethinking how to provide you with the complete understanding, tools, evidence and communications to help you realize that potential.

Innovating new study options. Applying advances in machine learning. Collaborating with providers and payers. Scaling evidence investments. We are committed to bringing you value across the clinical and commercial lifecycle through a deeper portfolio of real-world solutions.

- **Improve evidence generation** with novel ways of using and enriching real-world data to deliver insights
- **Build a scalable infrastructure** through enterprise and therapy-area platforms
- **Enhance collaboration** with payers and providers to ensure patients benefit from your treatment's potential
- Sharpen your commercial precision with richer insights and tools

It's an exciting time to re-imagine what's possible. Powered by the IQVIA CORE™, we want to help you collect and harness the

power of Real-World Insights to improve patient outcomes and your results

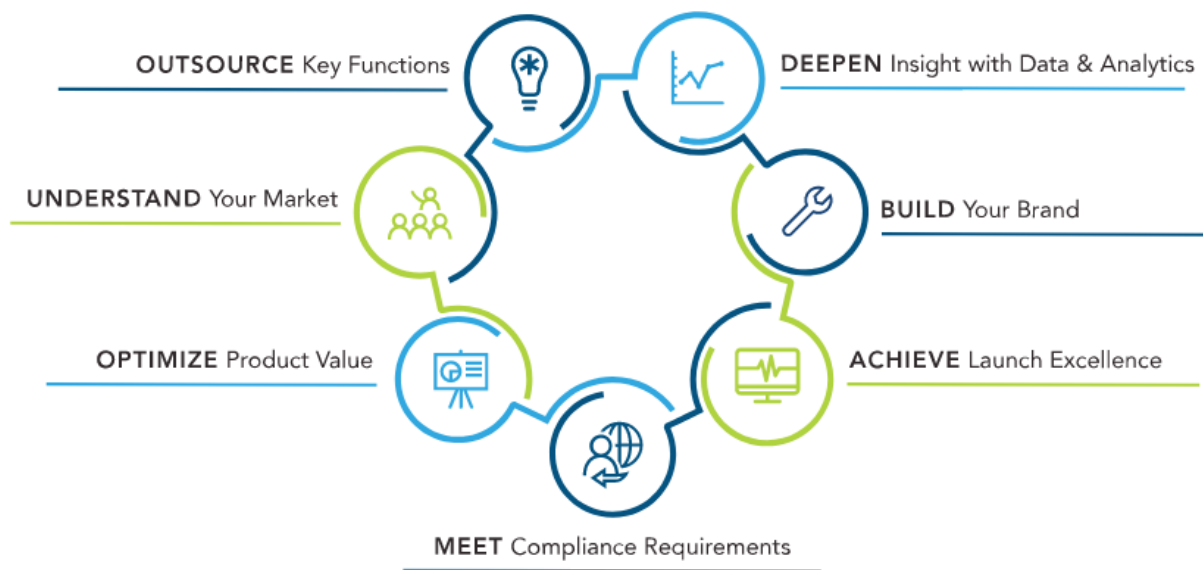

Power your performance with Human Data Science

Precision and speed. The world of life science commercialization is intensifying as you strive to demonstrate the unique value and outcomes your advances bring to human health. The rapid and deep insights of Human Data Science enable IQVIA to help you meet this challenge across the entire lifecycle. From launch through LOE, we are here to help increase your product's competitive differentiation, communicate its value to your customers, and improve overall market performance.

- **Tools for launch excellence.** We can help you couple precise insights about your markets with proven launch excellence strategies for launch strategies, stakeholder engagement strategies, market access plans, and market development
- **Outsourcing tools and services.** Streamline operations to help you reduce your long-term costs and increase efficiency

- **On-demand data and analytics.** Accurately see the state of your market in real time to ensure the visibility and agility to react to market forces post-launch

Rethink your approach to commercialization with IQVIA. Powered by the IQVIA CORE™, our global and local healthcare and functional experts can provide you with the actionable insights and resources to help you realize your product's value and accelerate commercial success.

Transform Your Decision-Making

Our world is being transformed by technology, and nowhere is this more important than in life sciences. Each day presents exciting new challenges. Today, the potential for the development of advanced treatments has never been greater. IQVIA Technologies supports this critical work with innovative technologies purpose-built for life sciences.

Life sciences professionals require innovative technology to accelerate important products to patients and move healthcare forward. Across the product lifecycle you make crucial decisions that change lives, populations and the world we all share. IQVIA Technologies is purpose-built for those driven by a higher purpose.

As part of the IQVIA COR IQVIA Technologies integrates data, analytics and unmatched healthcare expertise. IQVIA Technologies helps you drive greater connectivity and collaboration across the enterprise, resulting in increased efficiency, higher productivity, and the ability to quickly make the right decisions.

The lens you need to ask the right questions, and make the right decision

‘One size fits all’ has never applied in healthcare. And it never will. How you find, and treat, patients in oncology must be different than in infectious disease. Understanding regulatory and approval pathways is an entirely different journey in pediatrics than it is for Alzheimer’s treatments. We’ve known this, but until today our ability to access, connect and leverage data, technology, and advanced analytics, and apply the critical lens of domain expertise has limited how precise we can be.

Ask the right questions

From the earliest planning stages of clinical development, through launch and real-world assessment, therapeutic expertise is key to ensuring we are asking the right questions.

- What is the real-world impact of innovation in treatments such as cell and gene therapies, and how does it differ by patient group?
- What is the right way to navigate reimbursement requirements, globally, and how do the strategies change based on therapeutic area?

- What is the potential for machine learning in finding patients, and how can we ensure the right assumptions and the right context is used to build the best algorithms?
- How can we be more proactive, more precise, and even more creative, in figuring out what works, what doesn't, and why?

As the leader in human data science, IQVIA is at the forefront of integrating human science expertise with advances in analytics and technology to help customers ask better questions, and extract more meaningful insights.

Because to move healthcare forward, we must be able to respond to and reflect on the challenges, questions and concerns that are as diverse and as complex as the diseases themselves.

Explore IQVIA's deep domain expertise in the therapeutic and specialty areas you are committed to.
