

**INVENTORY MANAGEMENT IN SANTOKBA DURLABHJI
MEMORIAL HOSPITAL CUM MEDICAL RESEARCH
INSTITUTE**

**Internship Training
at
Santokba Durlabji Memorial Hospital Cum Medical Research, Jaipur**

**By
Priya**

**Under the guidance of
Dr. Barun Kanjilal**

**MBA Hospital & Health Management
2013–15**

**Institute of Health Management Research
Jaipur
2015**

TO WHOMSOEVER IT MAY CONCERN

This is to certify that Dr.Priya, student of MBA Hospital and Health Management from IIHMR University, Jaipur has undergone internship training at Santokba Durlabhji Memorial Hospital, Jaipur from 27th January 2015 to 15th March 2015.

The candidate has successfully carried out the study designated during her internship training and her approach to the study has been sincere, scientific and analytic.

The internship is in fulfillment of the course requirements. I wish her all success in future endeavors.

Dr.(Col.) Ashok Kaushik
Dean Academics and Student Affairs
IIHMR University, Jaipur

Barun K. Kanjilal
Ph.D
IIHMR University, Jaipur

Date.....

May 14, 2015

CERTIFICATE

This certificate is awarded to Dr. Priya in recognition of having successfully completed her Internship for the period from 27.01.2015 to 15.03.2015 on Project Inventory Management in SDM Hospital, Jaipur

During the period of her internship programme with us she was found to be very punctual, hardworking, inquisitive and a keen learner.

We wish her all the best for her future endeavors.

INSTITUTE OF HEALTH MANAGEMENT RESEARCH, JAIPUR

CERTIFICATE BY SCHOLAR

This is to certify that the dissertation titled Inventory management in Santokba Durlabhji Memorial Hospital cum research Institute, Jaipur and submitted by Dr. Priya Enrollment No. 1480 under the supervision of Dr. Barun K. Kanjilal, for award of MBA Hospital and Health Management of the university carried out during the period from 27st January, 2015 to 15th March, 2015. Embodies my original work and has not formed the basis for the award of any degree, diploma associate ship, fellowship, titles in this or any other Institute or other similar institution of higher learning.

Signature

Acknowledgements:

With immense pleasure I express my heartfelt gratitude to the Director of IIHMR Jaipur, Dr.S.D.Gupta and Dean, and my mentor Dr. Barun K. Kanjilal for having given me this opportunity to undergo training.

I am extremely indebted to all the professionals at Sankatoba Durlabhji Meromial Hospital (SDMH)for sharing generously their knowledge and precious time which inspired me to do best during dissertation training .I owe a great debt to Assistant Medical superintendent (SDMH) Dr.Heena kausar for providing me an opportunity to work as a trainee in their organization. I would like to thank Sanjay ghai(Purchase manager) and Rajendra Kumar Sharma (Senior pharmacist,), mentors for the dissertation, without whose help it would not have been possible for me to understand the hospital to the extent as I have now. I am highly grateful to all the staff of Central store department for their cooperation which enabled me to complete my special assignment in the department.

I am also grateful to all the department heads and staffs for giving me time in spite of their hectic schedule .Without their active cooperation and participation it would not have been possible to accomplish my task.

Abstract-

Dr.Priya

Advisor: - Prof.Barun K.Kanjilal

Keywords: - Inventory management, ABC analysis, VED analysis, ABC-VED matrix, HMIS.

Background: - Inventory or stock is defined as the stored accumulation of material resources in a transformation system. The planning and controlling of these inventories is also known as inventory management. It is an important concern for all types of businesses as effective inventory is essential for realizing the full potential of a supply chain.

Now a days, Organizations are more concerned with stock control because a lot of funds are invested in stock and most organizations carry out inventory control through stock taking, surprise checks and other methods, but there is always a variance between the actual result and the records kept by these organizations, thus exposing them to stock related costs that affect performance and service delivery.

Objective: - To identify the factors affecting inventory management performance in central store of SDMH and to analyze the consumption trend for determining the rank of items that include drugs and surgical both on the basis of their consumption .

Methodology: - The study was cross sectional, quantitative and focus group. The location of the study was the central store of the SDMH. Total consumables that include drugs and surgical items which was consumed in three months (December 2014-February 2015) in the hospital was taken as the sample. Data was collected through HMIS, records review, unstructured interview of the senior pharmacist, purchase manager and other staffs of the department. Various tools were used to do the data analysis like ABC analysis, VED analysis, ABC-VED matrix and MS Excel.

Findings: - As per ABC analysis, the findings that emerged showed that out of 1219 items only 167 items amount for 70% of the total expenditure. . Then VED analysis was done by categorizing all the consumables on the basis of its criticality and came to a conclusion that out of 1219 consumables, 212 i.e. only 10% were vital consumables and 886 i.e. only 17% were essential consumables. . Later ABC-VED matrix analysis was done to get the list of priority I consumables and it came out to be 356 consumables i.e. 29% consumable were priority I consumables. The general findings of the project were many like no inventory management tools (ABC,VED) were used to do the regular monitoring of the inventory, no proper schedule for indent order and delivery, no access control, no security guard and most of the times CCTV on off mode, time limit protocol for emergency indents were not established, no dedicated place for indents handover, Pests(mice) can be easily seen in the department, Many phone calls remain unattended in the department.

Recommendations: - The recommendations for the analysis were Strict control and regular check required for priority I consumables by top management personals, stock should be reviewed according to ABC-VED Matrix analysis, strict access control in central store is required, proper schedule should be maintained for indent order and indent delivery, to have a time limit (maximum 3 hours) for emergency indent delivery, change in the physical arrangement for receiving and delivery of indents, proper pest control in the area where indents are stored, requirement of one cordless phone in central store of SDMH.

Abbreviations used in the report:-

- 1) IIHMR - Institute of Health Management Research
- 2) SDMH - Santokba Durlabhji Memorial Hospital
- 3) ABC - Always Better Control
- 4) VED – Vital Essential Desirable
- 5) HMIS – Hospital management information system

Chapter 1

Introduction

1.1 Introduction of study

Inventory or stock is defined as the stored accumulation of material resources in a transformation system. The planning and controlling of these inventories is also known as inventory management. It is an important concern for all types of businesses as effective inventory is essential for realizing the full potential of a supply chain.

Inventory management systems are central to how companies track and control inventories. Having the ability to measure inventory in a timely and accurate manner is critical for having uninterrupted business operations because inventory is often one of the largest current assets on a company's balance sheet.

At present SDMH was not using any inventory management tool like ABC analysis or VED analysis. The top management of SDMH wanted to address two important issues:

1. To maintain adequate inventory for smooth functioning of the hospital.
2. To minimize the investment in inventory to enhance its profitability.

So, this study was done in SDMH to improve their inventory management and increase the efficiency of the central store department.

1.2 Hospital profile

Santokba Durlabhji memorial hospital is a trust managed, autonomous, fee for service, not for profit, multidisciplinary, private hospital, which conceptualized by vulnerable family patriarch, the late Padamshri Khailshanker Durlabhji. He had passion and compassion to deliver affordable health-care to the people of Rajasthan which would be second to none in the country. The hospital was established in 1971 and was inaugurated by late Smt. Indra Gandhi. It is located in the heart of pink city, spread over landscape 7.3 acres situated at Bhawani Singh road, Jaipur. It is self-contained campus with staff residences, a bank, a post office, medical stores, diary booth, in patient attendant complex (Dharamshala) and other living facilities.

The vision of SDMH is to be an integrated quaternary healthcare hub for delivery of affordable quality medical care in an economically viable, regionally, nationally and internationally positioned institutional environment. The mission of SDMH is to position itself as a hospital that cares. “SDMH is committed to providing quality health care at the most affordable rates to all sections of society, irrespective of caste, creed or color. Towards making this possible, we pledge to dedicate all our efforts and all our energies”.

This hospital is unique of its kind and it is also certified by ISO 900: 2000 with bed capacity of 450. The main targeted population is middle and upper middle class. It provides free services to terminally ill patients at Avedna Ashram. With a view to establish a system of clinical excellence, patient centricity, service delivery and ethical practices, team SDMH, through adherence to establish standards of healthcare delivery; applies medical science and technology in such a way so as to maximize benefits to health without concomitant risks. Though it is a multispecialty hospital but still there was lack of following services like medico legal cases (MLC), burns case when burns are >20% and organ transplantation.

1.3 Importance of inventory management

Organizations need to focus a lot on their inventory management. Investment in inventory should neither be excessive nor inadequate. It should just be optimum. Maintaining optimum level of inventory is the main aim of inventory management. Excessive investment in inventory results into more cost of fund being tied up so that it reduces the profitability, inventories may be misused, lost, damaged and hold costs in terms of large space and others. At the same time, insufficient investment in inventory creates stock-out problems, interruption in production and selling operation. Therefore, the firm may loose the customers as they shift to the competitors. Financial manager, as he involves in inventory management, should always try to put neither excessive nor inadequate investment in inventory

The importance or significance of inventory management could be specified in a number of ways like inventory management helps in maintaining a tradeoff between carrying costs and ordering costs which results into minimizing the total cost of inventory, it facilitates maintaining adequate inventory for smooth production and sales operations, avoids the stock-out problem that a firm otherwise would face in the lack of proper inventory management, suggests the proper inventory control system to be applied by a firm to avoid losses, damages and misuses.

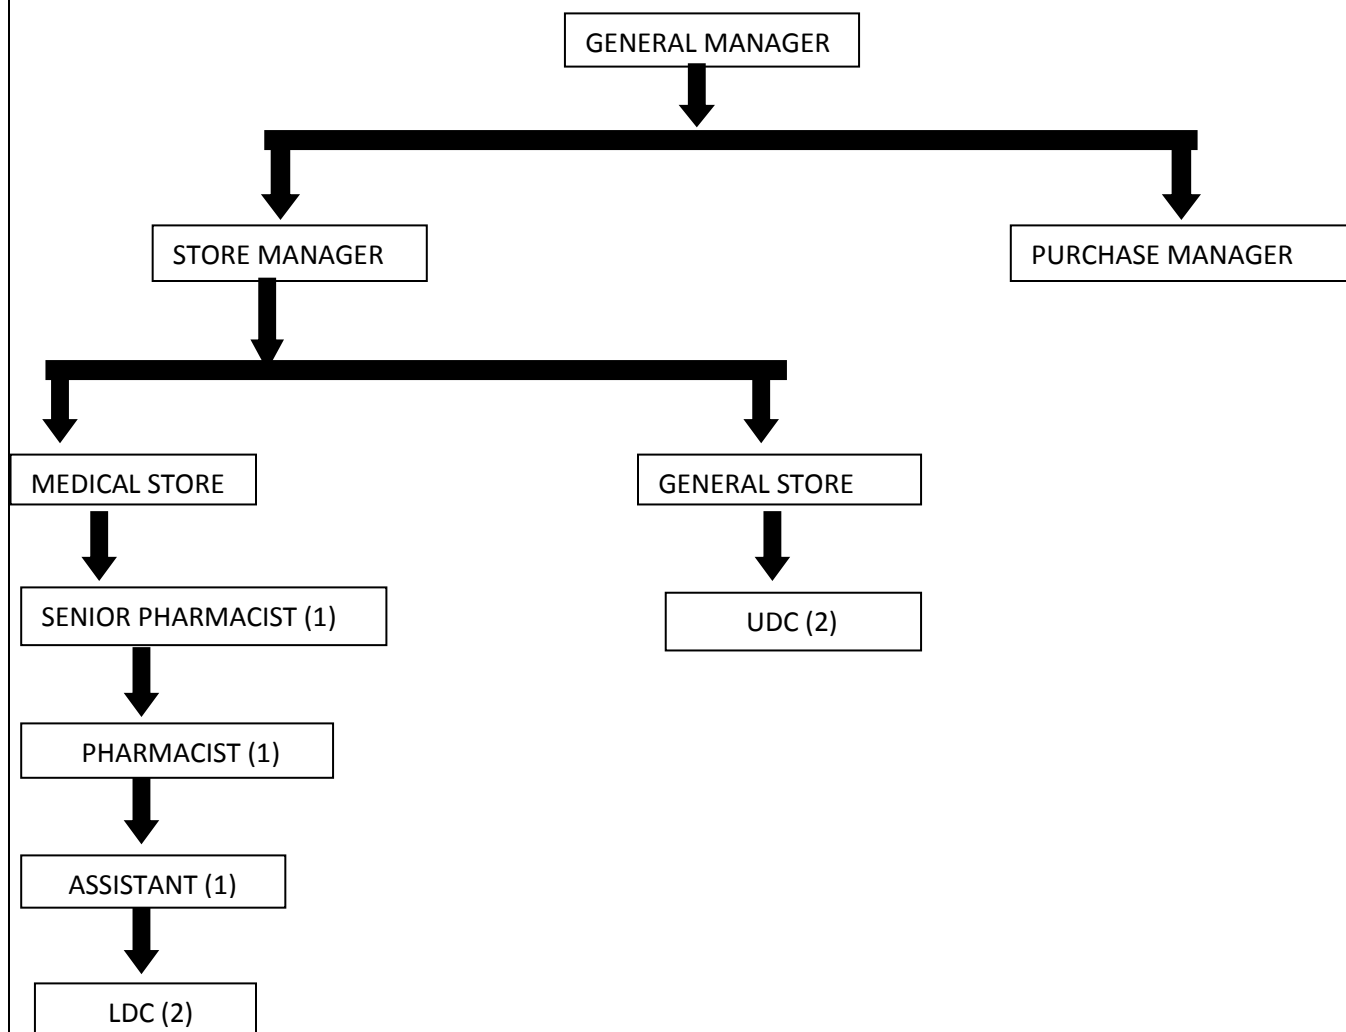

Chapter 2

The study setting

2.1 Organogram of central store

The study was conducted in the central store department of SDMH. Figure 2.1, explains the hierarchy of the central store department .This department is headed by the general manager and under him comes purchase manager and store manager. Store manager looks after the work of medical store and general store both. Senior pharmacist, pharmacist ,assistant and LDC all used to manage the day to day activities of medical store while only two UDC were enough to look after general store activities.

Fig.2.1 Organogram of central store

2.2 Process flow of central store

The following process was followed in the central store:-

Indent order by nurse of particular department:- The nurses used to place indent request any time before 15th day of the month. This indent is generally for one month however, provision for supplementary and emergency indent was also there.

Indent order by central store:- online indent requests are sent by the pharmacists on the same day. Indents are ordered on the basis of Reorder levels. Reorder levels are 30 days, 15 days and 7 days.

Indent supplied by supplier to central store:- supplier come with order copy (1), invoice copy (3). All indents checked according to the order copy by the central store personnel and then received.

Indents supplied by central store to particular department:- Indent supply is continued from 1st - 15th of every month. Indents are supplied by central store personnel to the respective department.

2.3 Procurement procedure

In this hospital the procurement procedure was done in following manner:-

It is of two types:-

- 1) Non-capital procurement
- 2) capital procurement.

2.3.1 Non-capital procurement process

Indents request is approved by 'approval authority'. 'Approval authority' consists of concerned doctors / HODs. Approval can be in verbal, online, written mode. Written document for this approved indent is prepared by purchase manager. The purchase manager requests for price quotation from different companies. Depending on best price, best quality and brand name, purchase manager gives formal approval to the company and decides whether the price will be charged by the patient or added in the package. Purchase manager sends the recommendations to the General Manager. General Manager approves it and forwards it to the store. The placement order is placed by the senior pharmacist. Indents are finally checked and received by the central store personnel.

2.3.2 Capital Procurement process

Capital purchase is approved by the capital purchase committee. It has six members. Chairing body is the Medical director. Other members include three doctors, two from administration (one from finance and one from store). Their meeting is held 2-3 times in a year.

Purchase manager requests for 'capital indent requirement' from all HODs within 30 days generally 2-3 times in a year. Purchase manager does the budgeting for these capital indents .And finally presented to the Capital purchase committee. They prioritize these capital indents on the basis of:-

- 1) Real replacements-Depends on the working days of the equipment and its repair cost.
- 2) Critical care unit and OT related:- Depends on its impact on patient benefit.
- 3) Advancements:- Depends on Doctor's qualifications and requirement. Respective doctor is invited for clarification of the requirement.

Finally the projection amount is finalized by the committee .The purchase manager Requests for the price quotation from 6-7 companies and Finalizes the one which best suits the requirement.

Chapter 3

The study design

3.1 Problem Statement

SDMH was more concerned with stock control because a lot of funds were invested in stock and stock forms were an important and major item of its investment, despite the fact that most of the times, they carry out inventory control through stock taking, surprise checks and other methods, there was always a variance between the actual result and the records kept, thus exposing them to stock related costs that affected performance and service delivery.

3.2 Research Question

How to ensure that there is adequate inventory, so that uninterrupted supply of all essential items is maintained?

3.3 Aim

To strengthen the inventory management for increased efficiency.

3.4 Rationale

The word “inventory” has been defined in many ways, as indicated in the literature. According to Chase, Jacobs and Aquilano (2004), inventory is the stock of any item or resource used in an organization. An inventory system is the set of policies and controls that monitor levels of inventory and determine what levels should be maintained, when stock should be replenished, and how large orders should be.

Inventory management involves providing the required inventory levels that will sustain the organization’s daily operations at minimum costs. This covers issues like determining the level of stock to order, when to order, establishing receipt and inspection procedures and providing proper storage facilities. Without proper stock control procedures in place, firms are likely to face two undesirable inventory levels. That is to say excessive/ high levels of inventory or inadequate/ low levels of inventory.

For efficiently running of any organization in today’s competitive environment proper implementation of inventory control is necessary to survive. Good inventory policy would therefore mean:-

- 1) Never to shortage of any item.
- 2) Never to build-up a very huge inventory.
- 3) Never to order materials in small quantity many times.

3.5 Objective

- 1) To identify the factors affecting inventory management performance.
- 2) To analyze the consumption trend for determining the rank of items on the basis of their consumption.

3.6 Type of study

This study was a Cross-sectional, quantitative and focus group study.

3.7 Sample

For this study, the total consumables (1219) which were purchased in three months from December 2014 till February 2015 in the hospital was taken as the sample.

3.8 Data collection method

The data collected was of two types primary and secondary data.

3.8.1 Primary data

The primary data was collected through personal observation during department visits and further information was gathered by discussion with the department heads and staff on the basis of un-structured interview.

3.8.2 Secondary data

The secondary data was collected through review of the past records and Hospital Management Information System (HMIS)

3.9 Data analysis tool

The following tools were used for data analysis by using MS Excel software.

- 1) ABC Analysis
- 2) VED Analysis
- 3) ABC-VED cross matrix

3.9.1 ABC ANALYSIS

In supply chain, **ABC analysis** is an inventory categorization method which consists in dividing items into three categories, A, B and C: A being the most valuable items, C being the least valuable ones. This method aims to draw attention on the critical few (A-items) and not on the trivial many (C-items).

Steps involved in ABC analysis:-

1. List of total consumables was prepared.
2. Their per unit price and annual consumption was determined.
3. Per unit price was multiplied with annual consumption to get their annual usage.
4. It was arranged in decreasing order of annual usage.
5. It was expressed as cumulative usage percentage.
6. Cumulative usage percentage upto 70% was taken as Category A.
7. 71-90% was taken as Category B.
8. 91-100% was taken as Category C.

3.9.2 VED Analysis

VED Analysis attempts to classify the items used into three broad categories, namely Vital, Essential, and Desirable. The analysis classifies items on the basis of their criticality for the organization.

Vital: Vital category items are those items without which the production activities or any other activity of the company, would come to a halt, or at least be drastically affected.

Vital items: - Required within 8 hours of patient admission.

Essential: Essential items are those items whose stock out cost is very high for the organization.

Essential items:- Required within 2 days of patient admission.

Desirable: Desirable items are those items whose stock-out or shortage causes only a minor disruption. The cost incurred is very nominal.

Desirable items:- Can wait for more than 3 days for its supply.

3.9.3 ABC- VED Analysis

A combination of ABC and VED analysis (ABC-VED matrix) can be gainfully employed to evolve a meaningful control over the material supplies. Category I includes all vital and expensive items (AV, BV, CV, AE, AD). Category II includes the remaining items of the E and B groups (BE, CE, BD). Category III includes the desirable and cheaper group of items (CD). Table 3.8.3 explains the management steps that should be taken for an efficient control of a particular category.

Table 3.9.3 ABC-VED matrix

Cost of not having a drug when required	Cost of having a drug when not required			
		A (High value)	B (Medium value)	C (Low value)
	V (Vital)	Regular stock with constant control	Medium stock	High stock
	E (Essential)	Medium stock	Medium stock	Low stock
	D (Desirable)	High stock	Medium stock	Very low stock

Source: Vaz FS, Ferreira AM, Kulkarni MS, Motghare DD, Pereira-Antao I. A Study of Drug Expenditure at a Tertiary Care Hospital: An ABC-VED Analysis. J Health Manag. 2008; 10:119–27.

By ABC-VED matrix Analysis, Drugs can be categorized into following groups:-

Class I - AV + BV +CV +AE +AD

Class II - BE +CE + BD

Class III - CD

Chapter 4

Findings and Recommendations

4.1 Findings of ABC analysis

ABC analysis done using MS excel software is explained in table no.4.1 that out of 1219 consumables only 167 (14%) consumables amount for 70% of the total expenditure, 241 (20%) consumables amount for 70-90% (20%) of total expenditure and 811 (66%) consumables amount for 90-100% (10%) of total expenditure .

Table no.4.1

Total no. consumables	A Category (70%)	B Category (20%)	C category (10%)
1219	167 (14%)	241 (20%)	811 (66%)

4.2 Findings of VED analysis

To do the VED Analysis, Pharmacists, senior pharmacists and purchase manager of central store was consulted on a regular basis.

Criteria for categorization of drugs:-

Vital items:- Those items that are required within 8 hours of patient admission.

Essential items:- Those items that are required within 2 days of patient admission.

Desirable items:- Those items that are required in 3 days or more.

Findings of VED analysis is explained in table no.4.2 that out of 1219 consumables only 212(17%) consumables come under vital category, 886(73%) consumables come under Essential category and 121(10%) consumables come under Desirable category.

List of the drugs along with its categorization is given in annexure 5.1

Table no.4.2

Total no. of consumable	V Category	E Category	D category
1219	212 (17%)	886 (73%)	121 (10%)

4.3 Findings of ABC- VED Matrix analysis

Findings of ABC-VED analysis is explained in table no. 4.3 which represents that out of total 1219 items ,23 items were AV,136 items were AE,8 items were AD,34 were BV,168 were BE,39 were BD,155 were CV,582 were CE,74 were CD.

Table no.4.3

	A category	B category	C category
V category	23 (2%)	34 (3%)	155 (13%)
E category	136 (11%)	168 (14%)	582 (48%)
D category	8 (1%)	39 (3%)	74 (6%)

Class I items = AV+AE+AD+BV+CV

Class II items = BE+BD+CE

Class III items = CD

On prioritization of consumables it was found that 29% consumables come under priority I, 65% consumables come under priority II and only 6% come under priority III. List of priority I consumables given in Annexure 5.2.

4.4 Findings on management process

While doing the study in the department, following were the findings related with day to day activities observed during the visits:-

- ☐ No inventory management tools (ABC, VED) were used to do the regular monitoring of the inventory. Random checking was done for management. Inventory was maintained by reorder level and list of lead time of the all the vendors were maintained
- ☐ Proper monitoring of all the consumables was not done as there was no categorization of consumables.
- ☐ At present there was monitoring and control of only AV and AE category consumables by top management. As these consumables were used by the emergency departments or operation theater. So, these were given priority (vicryl 2519 vp , inj.integrilin 75mg/100ml).
- ☐ Under stocking of AD category consumables.(empty blood bag triple with sagm 350ml , skin stapler pmw35) .
- ☐ No proper schedule for indent order and delivery. There was no schedule prepared for different departments to order or receive indents.
- ☐ There was no access control, no security guard in the department and the CCTV which was there in the department was most of the time on switched off mode.
- ☐
- ☐ Time limit protocols for emergency indents were not established. It was not communicated within how much time the indent should be supplied to the respective department.
- ☐ No dedicated place for indents handover. Suppliers used to deliver indents on the working desk of pharmacist.

☐ Pests (mice) can be easily seen in the department. Many phone calls remain unattended in the department as the pharmacists use to be busy in checking indents.

4.5 Recommendations

☐ Strict control and regular check required for priority I consumables by top management personals. The consumables should be stored in large cupboards under lock and key.

Senior pharmacists should be given its responsibility.

☐ Moderate attention should be paid to priority II consumables by middle level management personals. Pharmacists should be given its responsibility.

☐ Low level attention is required for priority III consumables by low level management personals. LDC should be given its responsibility.

☐ The stock should be reviewed according to ABC-VED Matrix analysis on a regular basis.

☐ Strict access control in central store is required. CCTV should be in switch on mode always.

☐ Proper schedule should be maintained for indent order and indent delivery. Nursing stations should be informed as well as the staffs of central store about the schedule.

☐ To have time limit (maximum 3 hours) for emergency indent delivery.

☐ Change in the physical arrangement for receiving and delivery of indents.

☐ Proper pest control should be done on a regular basis in the area where indents are stored
Requirement of one Codeless phone in central store.

4.6 Ethical considerations

Clearance of conducting the study by ethical committee of the SDMH was taken. The purpose of the study was explained to the authorities to avoid inconveniences and misunderstandings about the purpose. The information collected was kept highly confidential.
