TO WHOMSOEVER MAY CONCERN

This is to certify that Anirudh Banerji, student of Post Graduate Diploma in Hospital and Health Management (PGDHM) from Institute of Health Management and Research, Jaipur has undergone internship training at Medanta The Medicity, Gurgaon, from 1 February to 30 April 2014.

The candidate has successfully carried out the study designated to her during internship training and his approach to the study has been sincere, scientific and analytical.

The Internship is in fulfillment of the course requirement.

I wish his all the success in all his future endeavors.

Dr. Ashok Kaushik

Dean, Academics and Student Affairs

ACKNOWLEDGEMENT

I convey my heartfelt thanks to Dr. Naresh Trehan, Chairman and Managing Director, Medanta- The Medicity, Gurgaon, Haryana for granting me the opportunity to work with this organization.

I express my sincere gratitude to Mr. Pankaj Sahni , Chief Operating Officer, Medanta for guiding me and granting me the enviable honor and rare privilege to work as Floor Manager of the Institute of Gastroenterology and Hepatobiliary Sciences, at Medanta during the study period.

I am thankful to Dr. Awadhesh Kumar Dubey, (Medical Superintendent) and Dr. Sumana Arora (Deputy Medical Superintendent) for allotting this project to me.

This project would not have been possible without the contribution of the Nursing and Paramedical Staff of the dialysis unit.

Lastly, I would like to express my sincere thanks to my guide, Dr. Suresh Joshi, for his invaluable guidance which kept me motivated.

Anirudh Banerji

IIHMR-Jaipur

LIST OF ABBREVIATIONS:

OPD – Out Patient Department

IPD – In Patient Department

SLEDD – Slow Low Efficiency Daily Dialysis

CRRT – Continuous Renal Replacement Therapy

CAPD - Continuous Ambulatory Peritoneal Dialysis

CCPD - Continuous Cyclic Peritoneal Dialysis

ICU – Intensive Care Unit

ADU – Acute Dialysis Unit

1. EXECUTIVE SUMMARY

This study was conducted at the Division of Nephrology at Medanta The Medicity, Gurgaon, Haryana. The chief purpose was to assess the efficiency of the scheduling system used for managing the slots of the Dialysis unit (study period – 01/04/14 to 20/04/14).

This data was collected by direct observation and examination of records. It included collecting data on the number of cases performed daily, weekly and monthly.

The first step involved an orientation of the set-up of the Dialysis Unit. This was followed by a study of the distribution of the case load. All the concerned staffs were involved and communicated about the new process to be implemented and regular follow up of the process was done.

It was concluded that by increasing the utilization of the IPD dialysis machines and promoting re-distribution of the slots between the OPD and IPD dialysis units, the overall utilization of the Dialysis unit under the Division of Nephrology could be increased.

This is an ongoing study, with the feasibility of implementation being studied.

2. INTRODUCTION

Dialysis is the removal of excess water, electrolytes and wastes from blood. It is an artificial replacement for a lost Kidney function, which may be acute or chronic.

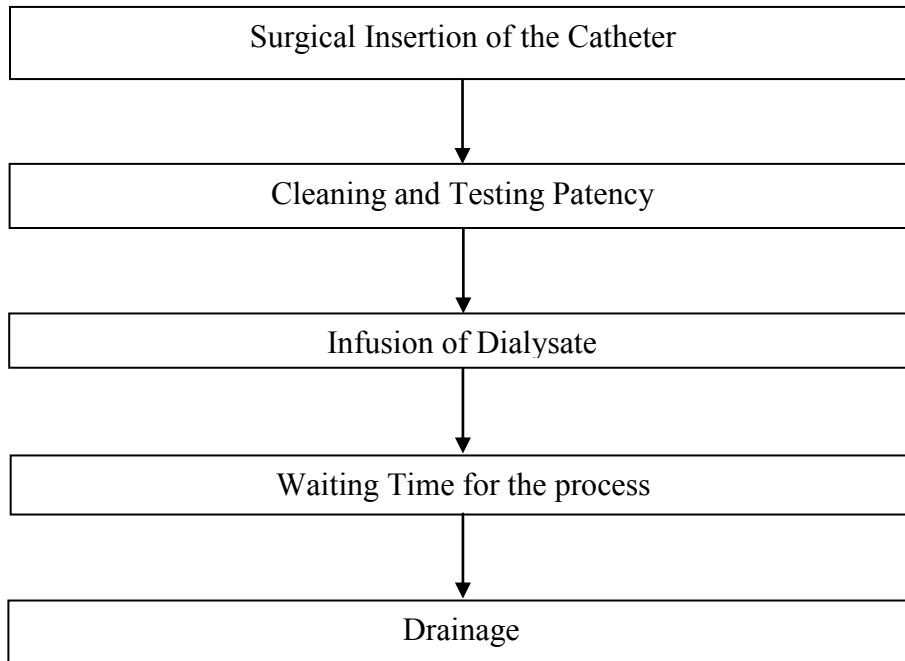

Dialysis replaces three main kidney functions:

- Removing waste from the blood
- Removing excess fluid from the blood
- Maintaining electrolyte balance

Dialysis is of the following types:

- Hemo-dialysis
- Peritoneal Dialysis
 - Continuous Ambulatory Peritoneal Dialysis (CAPD)
 - Continuous Cyclic Peritoneal Dialysis (CCPD)
- Hemo-filtration
- Continuous Renal Replacement Treatment (CRRT)
- Prolonged Intermittent Renal Replacement Treatment (PIRRT also known as SLEDD)

A possible flowchart for a dialysis may be as follows:

As such, the current system consists of a patient calling for an appointment and the appointment being granted depending upon the availability of the time slots. Once the patient reports to the hospital for dialysis, a complete kidney work-up is performed on the patient to determine the extent of the malfunction of the kidney

3. REVIEW OF LITERATURE:

The presence of a well equipped Dialysis unit is a boon for the functioning of a hospital, primarily as it serves as a great support medium for patients with acute kidney injury and chronic renal disease. The dialysis unit may be used to provide services to patients till the time the patient is able to secure a kidney transplant

The dialysis unit at Medanta The Medicity provides dialysis services to both In-patients and Out-patients. However, among Out-patients, preference for allotting slots is given to those patients who may have a kidney transplant planned in the near future. Patients who do not have such possibility are encouraged to use the Dialysis facility at the Medanta clinic at Defence Colony, Delhi.

Every patient goes through a registration and administrative intake process, a series of diagnostic testing encounters, all of which take place, for the most part, within the hospital. The patients must be registered into the hospitals information system and have their demographic and insurance information properly obtained. The patients managed care organization may need to be notified.

Typically, the patient is initially assessed by a Nephrologist who makes an initial judgment of the case and prescribes dialysis after due consideration. Among other aspects, data recorded about a patient include:

- Basic diseases and comorbidities
- The date of the first session of haemodialysis
- Any history of previous transplants
- Steroid intake, if any
- HBV vaccination
- Viral markers for HbsAg, HCV, HIV, HCV RNA
- Dates of initiation of and final vascular access
- Pneumococcal vaccination
- Anti HBs Antibody titres

Past this point, a series of tests are prescribed including a Chronic Kidney Disease (CKD) work up, a check of the patient's creatinine level, Calcium, Phosphorus, Urea levels and an Iron study. In addition, the blood group of the patient is also checked, along with a Complete Blood Count (CBC) test and a test of the acidosis level at that point of time. The patient is also prescribed HIV infection screening and tests for the Hepatitis viruses, followed by a scrutiny of the patient's immunization history. The patient is encouraged to get all these tests done at the laboratory present at Medanta The Medicity, but the hospital also accepts tests done at Lal Pathlabs. Some other blood tests are PTH, and a lipid profile every three months. The patients must be examined in the OPD clinic once a month and also evaluated for Cardiovascular, Bone and other vascular diseases as these are common in dialysis patients.

The patient is then counseled and evaluated about the type of access to be used, which include femoral catheters, IJ catheters permanent accesses and AV fistulas.

The patient's weight is recorded before and after each dialysis session, which is used as an indicator of the dialysis sessions and the benefits accrued to the patient due to the dialysis session.

The dialysis unit at Medanta The Medicity possesses 23 dialysis machines and 1 CRRT (Continuous Renal Replacement Therapy) machine. Out of the 23 dialysis machines, 16 are reserved for the OPD (with one of these 16 machines being reserved for positive patients), 3 machines are reserved for IPD patients and are stationed in ICU 3. The 4 additional dialysis machines are used as portable equipment.

Typically, a patient would be prescribed 3-4 dialysis sessions per week. The first session would be of 2 hours, the second session of three hours and all subsequent sessions of 4 hours.

4. RATIONALE

Medanta The Medicity believes in catering medical services to all those who seek it, so that each patient is assured of medical services and no patient is left wanting.

The patients who are offered dialysis at Medanta The Medicity are those who may have a plan for a kidney transplant in the near future. Patients who are just on supportive dialysis are encouraged to seek dialysis at the clinic at Defence Colony.

Waiting for initiation of dialysis means that these patients, who may have a scope for kidney transplant may choose to go to some other hospital instead, which could lead to a loss of a patient to a competing hospital. Therefore, it is imperative that the capacity to accommodate these new patients be created at the earliest.

5. AIM

To understand the working of the Dialysis unit at the hospital

6. OBJECTIVES

- To understand the average waiting time for OPD patients for the 1st dialysis slot
- To understand the current distribution of IPD dialysis time slots
- To understand whether an interrelationship could be created between the management of the time slots of the OPD and IPD dialysis machines in order to better meet the overall demand for dialysis

7. RESEARCH METHODOLOGY

7.1 TYPE OF RESEARCH DESIGN

Study Type : Cross sectional descriptive in nature.

Study site: The Dialysis Unit of the Division of Nephrology, Medanta -The Medicity.

Study Population: All the Patients discharged and admitted from Emergency Department

Study Duration: 1st March 2014- 31st March 2014)

Study tool: Dialysis Scheduler as well as physical recording of data

Sample Size: 1145 OPD patients and 214 IPD patients

7.2 DATA COLLECTION

Data was collected by primary and secondary sources:

I. Primary:

- Direct Observation

II. Secondary:

- Data from the Dialysis scheduler

7.3 DATA BASE MANAGEMENT

The observational findings and the information collected was compiled, analyzed manually as well as on excel sheet and a report was prepared.

8. DISCUSSION

The Dialysis unit at Medanta the Medicity possesses 23 dialysis machines out of which, 16 are reserved for the OPD unit, 3 for the IPD unit and 3 machines are used as portable machines.

Some assumptions must be made in order to facilitate our analysis about the Dialysis unit.

- Shifts possible for OPD machines – 3

Number of slots available per month – $16 \times 3 \times 26$

- “1248”

- Shifts possible for IPD machines – 4

Number of slots available per month – $3 \times 4 \times 30$

- “360”

- Shifts possible for portable machines – 4

Number of slots available per month – $4 \times 4 \times 30$

- “480”

- The OPD dialysis unit would ideally function at 100% capacity. Only unplanned cancellations could decrease the utilization of the OPD dialysis unit.
- Each machine can be allotted a maximum downtime of 20% of its possible utilization, for the purpose of maintenance and emergencies
- The IPD machines can be said to be working according to the current demands of the In-Patients, with less than 100% utilization due to less demand from the In Patient Departments.

These machines are used to provide dialysis to all the patients coming to Medanta The Medicity. In the month of March, the Dialysis unit provided services to a record 1145 OPD patients and 214 IPD patients. However, there were still 53 patients who had to wait, on an average, for 2.45 days for the initiation of Dialysis. This creates a situation where the patient may choose to not wait and go to some other hospital instead.

As per observations, it is not possible to increase the current capacity of the OPD as there is lack of physical space and there is inability to create outlets for RO water.

Thus, it becomes necessary to attempt to accommodate this unmet demand from the OPD patients within the hospital.

Figure 1: Dialysis statistics for the month of March 2014

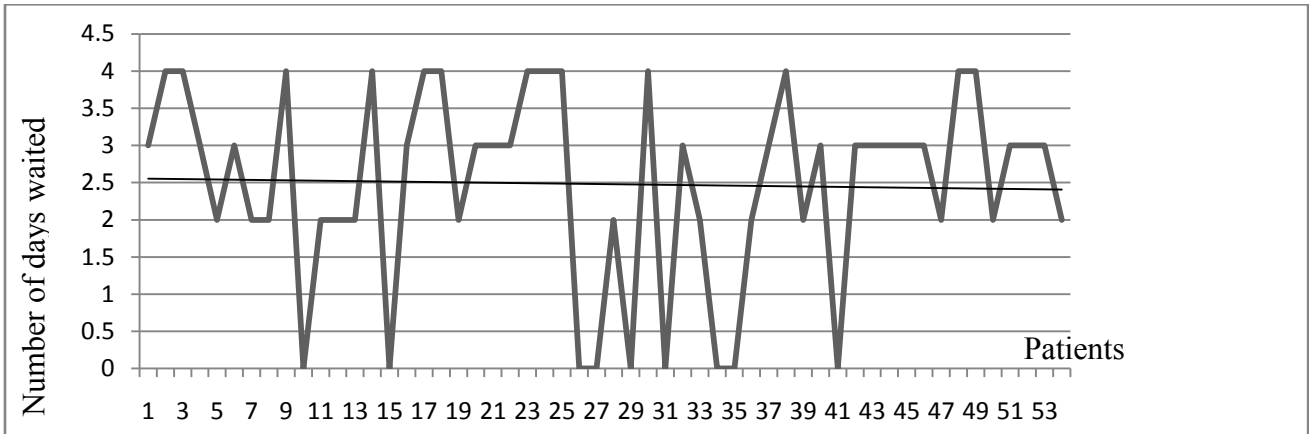

Area	Number of Dialysis Slots available	Number of Dialysis performed	Utilization
OPD	1248	1145	91.75%
IPD	360	214	59.44%
Portable Machine	480	466	97.08%

As per the observations, it was seen that while the OPD dialysis machines are currently being utilized as much as 90% on the basis of available slots, the IPD machines are being utilized to as low as 60%. An argument could be made that this is because there is simply not enough demand from the In Patient department for dialysis and thus, there is no demand.

However, this limited utilization from the IPD dialysis unit is projecting a skewed nature of the utilization of the overall dialysis unit.

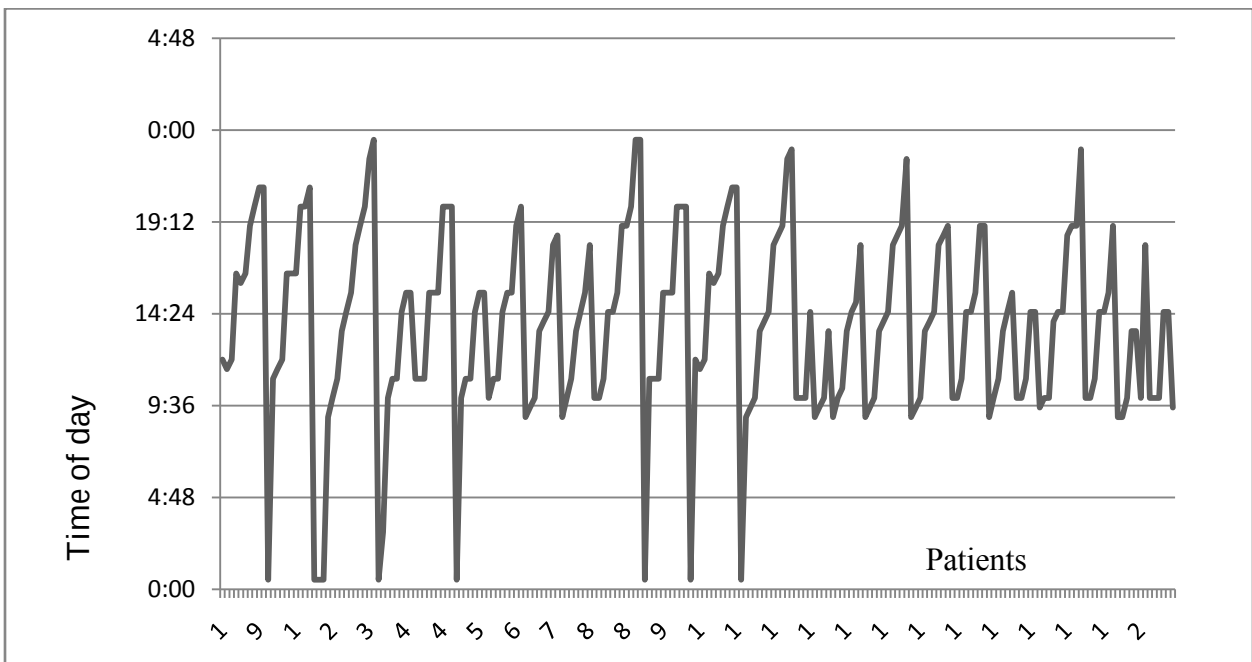

The average number of days waited by the OPD patients was found to be as follows:

Figure 2: Waiting Time Plot from appointment to first dialysis for OPD patients

The start time of the dialysis of the In patients was found as follows:

Figure 3: IPD Dialysis Start-time Plot

According to the observations, it becomes clear that if 2 of the 3 machines from the Dialysis unit are reserved for the OPD patients from 7am to 11am, then an additional 52 slots can be created for Out Patients, which could help meet the unmet demands of the OPD without compromising on the services provided to the IPD patients.

9. SUGGESTIONS

- 2 out of the 3 IPD machines be reserved for OPD patients from 7am to 11am. This would create an additional ($26 \times 2 = 52$) slots for OPD patients. This would also increase the utilization of the IPD machines by almost 13%.
- In order to maximize planned cancellations, the feasibility of taking payment in advance for the next appointment could be studied, with the payment being forfeited in case of an unplanned cancellation

10. PROJECTED IMPACT

- Reserving the 2 IPD slots per day would create an increase of 4.5% of capacity to provide dialysis, without increasing the cost of manpower and cost of construction to increase capacity.
- Asking for prepayment for the next appointment could result in an increase of the OPD utilization by 10%.

11. CONCLUSION:

The current unmet demand of the OPD patients could be met by simply redistributing the case load between the OPD and IPD dialysis units. This would not only increase the revenue for the dialysis unit, but also increase the overall utilization of the dialysis unit of the hospital.
