Objectives:- To evaluate the safety and performance of Polymer Free Everolimus Eluting Coronary Stent System implanted during routine clinical practice in India at 1 year after index procedure.

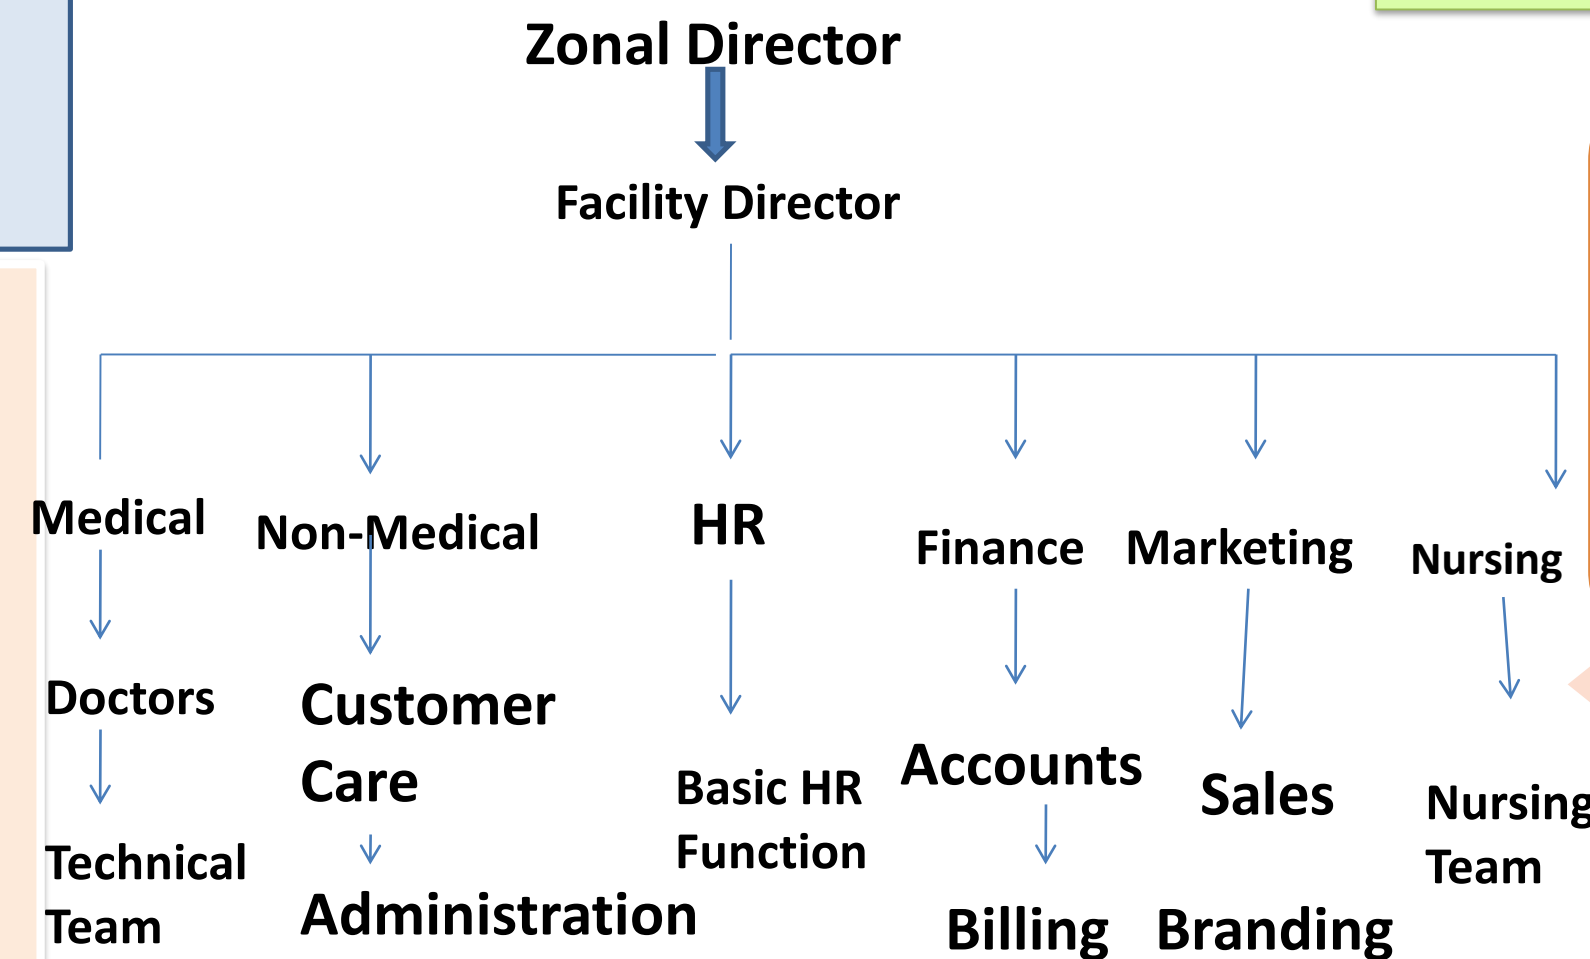

CHALLENGES:-

- Some staff members are not cooperative.
- Not able to ask question because of busy schedule of supervisors.
- Nursing staff is not cooperative.

USEFULNESS:-

- Enhancing skills and gaining the practical knowledge.
- Gaining knowledge about the Clinical Trail
- Understanding of the different committee role in clinical research (SRC,ETHICS COMMITTEE)

Organization Structure

Result:-Study is ongoing result is yet to come.

Learning-

- Procedure of clinical trial
- Roles of committee in clinical trial and documentation in clinical trial
- File auditing

Introduction

- Coronary artery disease (CAD) is a condition in which the coronary arteries are narrowed by deposits called plaque.
- The coronary arteries originate from the aorta and supply blood and oxygen to the heart muscle allowing it to pump blood to the body. However, these arteries can become narrowed by inflammatory fatty deposits called plaques. This disease process is called atherosclerosis.
- If a plaque suddenly ruptures, a blood clot can form and block the heart's blood supply.

VISION:- To Create a world Class Integrated Health Delivery System in India.

Mission:- To be a Globally Respected Healthcare Organization known for Clinical Excellence and Distinctive Patient Care.

Strength

The hospital's clinical research department has skilled team of doctor and healthcare professional .

Weakness

Due to ethical guidelines in research requiring effort and financial resource are also limited .

Opportunities

Advancement in medical have to explore research in emerging treatment and collaboration with company .

Threats

Clinical research department must ensure the confidentiality and security of data and regulatory challenge are also there.
