

INTERNSHIP REPORT

Name- Manish

IIHMR-U/2022-24/02/0401

Topic: Market Insights and Future Trends for Advanced Wound Care Products in India.

Introduction: Burn injuries are a significant public health issue globally, affecting millions of individuals each year. These injuries range from minor burns to severe cases requiring extensive medical intervention. Traditional methods for treating burn wounds often fall short in promoting optimal healing and minimizing complications. Advanced burn wound management techniques, including the use of specialized dressings, skin substitutes, and innovative therapies, have emerged to address these gaps. These methods aim to accelerate healing, reduce infection risks, and improve overall patient outcomes. The adoption of advanced burn care products varies across regions due to differences in healthcare infrastructure, economic factors, and regulatory environments. This study explores these dynamics and their impact on the management of burn injuries.

Objective of Internship

To evaluate the current landscape of burn injuries and the effectiveness of advanced burn wound management methods. The goal is to identify key trends, challenges, and opportunities for growth and provide strategic recommendations for market penetration and improvement of patient care outcomes.

Organizational Profile

Fibroheal Wound care Pvt Ltd is a pioneering company specializing in advanced wound care solutions in India. Our innovative products, made from silk fibroin, are designed to provide effective and efficient healing for various types of wounds. With a strong commitment to quality and research, Fibroheal aims to revolutionize wound care in India, ensuring better patient outcomes and improved quality of life.

Key Activities/Projects Undertaken Other than Dissertation:

1. Research and Analysis:

- **Market Analysis:** Analyzed the current market landscape for advanced burn care products, identifying key competitors, existing treatment protocols, and unmet needs in the market.
- **Cost-Effectiveness Analysis:** Investigated the potential cost-effectiveness of advanced burn care products compared to existing treatments, providing valuable insights for future product development and market positioning.

2. Data Collection and Analysis:

- **Healthcare Professional Discussions:** Engaged with healthcare professionals to gather insights into their experiences and preferences regarding advanced burn care products.

- **Patient Interviews:** Conducted interviews with patients who have used advanced burn care products to understand their experiences and identify areas for improvement.
- 3. **Development and Communication:**
 - **Patient Education Materials:** Developed educational materials to raise awareness about advanced burn care options and their benefits.
 - **Presentations:** Prepared presentations on market findings and product potential for internal stakeholders and relevant conferences, aiming to generate interest and support.
 - **Marketing Materials:** Contributed to the development of draft marketing materials highlighting the benefits of bioengineered skin substitutes and other advanced burn care products.

Key Learnings from Internship

During my internship at Fibroheal Woundcare Pvt Ltd, focused on the market assessment of advanced wound care products in India, I gained valuable experience in several areas:

- **Deepened Understanding of Advanced Burn Care:** Gained comprehensive knowledge about various advanced burn care products, their mechanisms, and their impact on patient outcomes, highlighting the significant unmet medical need in this area.
- **Market Research and Analysis:** Learned about existing treatment options, competitor landscape, and potential market opportunities for advanced burn care products, emphasizing the importance of considering commercial viability alongside clinical efficacy.
- **Data Analysis Skills:** Developed skills in data collection techniques, statistical analysis methods, and drawing meaningful conclusions from data through activities like healthcare professional and patient interviews.
- **Communication and Presentation Skills:** Enhanced my ability to effectively tailor information to different audiences by developing patient education materials and presenting research findings.
