

Objectives

- To examine the condition before implementation of program and after implementation of program.
- To study the impact of the program on the members life.
- To study the benefits received by the dairy member's through loan.
- To study the various problems faced by the dairy members in the study area.
- To study about the increment in daily milk production.
- To know about the condition of buffalo breed improvement .

Methodology

- **Strategy:** The overall strategy of research adopted in this study will be individual dairy members level survey as per need.
- **Target Population:** Dairy member of village.
- **Sample:** Interview of members of dairy co operative program.
- **Sampling method:** Random and purposeful sampling done to identify the respondents

Conclusion

Lupin HWRF dairy co-operative formation program undoubtedly begun to make a significant contribution in poverty alleviation and empowerment of poor. The present study is an attempt to analyses the socio-economic development of members and other beneficiary's. The performance of this program was good, but only few people were impacted by being members of dairy.

RECOMMENDATIONS

- Loan amount should increase for purchasing new cattles.
- Only a small village benefitted by this program, it should be broader in area.
- Regular medical check up of cattles.

Impact after implementation of project

- Improvement of houses in village.
- Betterment of Children education.
- Purchase durables.
- They earn more benefit through dairy.
- All villagers came to know about benefits of murrah breed, now they all have murrah buffalo.
- Villagers are happy because more transparency is there in payment distribution.
- Financial conditions became better.
- Increase in social status.
- Now they can save money for future.
- No need to take small loans from landlord on high interest for fulfilling daily needs of home.
- Some people started their own work.
