Firstly the raw data was ordered, organized and was checked for completeness and consistency. Some of the data errors were corrected without influencing the distribution of variables. The distribution of the variables before cleaning the data was compared to distribution of variables after data cleaning. 9 entries were found to be invalid, hence the data set was reduced to 144 entries. Data was analysed using appropriate statistical methods in Microsoft Excel.

	Jalore	Barmer	Dungarpur	Banswara
Estimated Maternal Mortality	110	184	101	143
Actual Deaths	31	18	36	68
Gap Between Actual and Estimated	79	166	65	75
